

Grass Seed

Seed Quality

If you want your amenity grass to perform without compromise then it is vital to start by selecting and sowing the right mixture. This will encompass a number of key features. Firstly, the mixture will contain **species and varieties** that have been **selected and bred** to deliver the results that you expect – whether it is for a football pitch, tennis court or bowling green.

The **quality of the seed** which goes into each and every bag is also critical. Nobody wants to introduce weeds onto the site they are seeding and excessive quantities of dust or inert matter will make absolutely no contribution to any projects which you are planning to undertake. But seed purity is only half the story – the ability of the clean seed to germinate and establish rapidly is just as important.

When you specify an MM mixture you can rest assured that all these important aspects have been covered as part of our comprehensive Quality Control Programme. With state of the art seed cleaning facilities and a well equipped seed testing laboratory we know that every seed that goes into an MM bag is there for the right purpose.

And when you invest in an MM mixture there is an added quality bonus – our mixtures are treated with Headstart. This user-friendly, non toxic treatment can help your grass get off to the best possible start – especially if conditions at sowing time are less than ideal.

So, next time you are buying an amenity mixture remember that not all grass seeds are created equal! Make the wrong choice and your project could be compromised from day one. Make the right choice – MM mixtures – and all your projects will have the best foundation for future growth.

YOUR KEY TO THE SUCCESSFUL ESTABLISHMENT OF ALL GRASS AREAS.

The natural revolutionary grass seed treatment that ensures rapid germination

HEADSTART® **GOLD** is the latest in performance enhancing grass seed coatings for sports fields, golf courses, lawns and amenity turf.

HEADSTART® **GOLD** is a biological germination accelerator which is the second generation of the original headstart formula. HEADSTART® **GOLD** has been further developed and improved in a number of different ways through research, testing and field trials work. HEADSTART® **GOLD** benefits from minerals such as Phosphorus, Sulphur, Copper and Molybdenum. These nutrients stimulate root formation, development and growth, ensuring that the seedling grass plant develops a strong root system during the critical start-up phase. This leads to better access to moisture and nutrients and makes the grass seedling plant stronger and more resistant to stress.

In a short time, HEADSTART® **GOLD** can help you by giving faster germination, creating stronger roots and ultimately, healthier and stronger amenity turf. The improved seed technology of HEADSTART® **GOLD** works to help improve amenity grass establishment in all situations. This, along with quality MM seed, gives sports and amenity turf the best possible start in all reseeding of sports and amenity situations.

HEADSTART® **GOLD** comes as standard on all MM seed mixtures. MM seed offers the highest quality seed in germination and purity standards, meeting the high demands and expectations of today's professional grass users.

GOLF

Which MM Golf mixture is ideal for you?

TECHNICAL OVERVIEW

The demand and pressure placed on the modern day Greenkeeper to produce the best possible, consistent playing surfaces continually grows at a pace. Ever improving standards and increases in the amount of winter golf add to the difficulty of the task. In order to satisfy the needs of today's golfers it is of paramount importance to choose the best grass seed mixtures available. Seed quality, purity and vigour are the essential building blocks for success. Don't compromise your plans and projects, choose seed from the MM Range.

GOLF GREENS

Greens are often the focus of praise (or criticism!) at any club and are invariably what the whole course is judged on. Success will largely depend on the skill and expertise of the Greenkeeper and their turf management practices. Correct grass seed selection and the desire for improvement are equally as important.

The traditional chewing fescue/browntop bent mix, **MM11**, remains a popular choice in many cases and can be used from spring to autumn. It is ideal for new constructions and overseeding existing swards. A slight variation of which is **MM10**, both mixes are fine leaved, disease resistant and make good, dense putting surfaces.

Where it is difficult to maintain fescue in the sward or where levels of wear are greater use **MM9**, a three way browntop bent mixture, in late summer/early autumn for best results. Maintenance requirements will be higher as it produces an aggressive growing, tight, dense sward for the ultimate surface.

For links style courses, sustainable golf or for early season overseeding use **MM8**, a four way fescue mix with excellent disease resistance, drought tolerance and minimal fertiliser requirements.

GOLF TEES

A mixture that is both capable of rapid establishment and fast recovery from divot scarring and high wear is a valuable asset on any course. An all ryegrass blend, such as **MM50**, is the most practical solution. For large tees where play is less intense, **MM22** is a viable option. Where damage and wear are minimal use **MM12** or **MM13**, both are suited to links style courses, are drought tolerant and have low maintenance requirements.

GOLF FAIRWAYS

Adaptability is probably the key attribute here because soil conditions, light and shade, contouring and wear will vary markedly in different areas of the course. Choose low maintenance, drought tolerant mixtures with creeping varieties where wear levels are low, such as **MM12** or **MM13** and select ryegrass mixes, such as **MM22** or **MM50**, on high divot or intense wear areas.

MM 7

EXTREME WEAR GOLF GREENS

A modern mixture for quick renovations of worn and damaged areas of fine turf.

- Fast germination and establishment
- High wear tolerance
- Fine leaved
- Fast coverage of damaged areas and emergency repair work

Available in

20 kilo packs

40% Cyrena Perennial Ryegrass

40% Venice Perennial Ryegrass

10% Caldris Chewings Fescue

10% Sefton Browntop Bent

sowing rate 35g/m²

oversowing rate 10 - 20g/m²

pack size 20kg

mowing height down to 5mm

MM 8

GREENS

A traditional mixture, especially useful for spring overseeding of high quality golf greens to improve sward composition and aid recovery from disease scarring.

- Excellent for spring and summer overseeding
- Very drought tolerant
- Greater disease resistance
- Low nutrient requirement
- Produces a fine, dense sward
- Suits traditional, sustainable and
- Links style regimes

40% Caldris Chewings Fescue

15% Carousel Slender Creeping Red Fescue

45% Aporina Slender Creeping Red Fescue

sowing rate 25g-35g/m²

oversowing rate 15-25g/m²

pack size 20kg

mowing height Down to 5mm

MM 9

GREENS

Excellent mixture for summer overseeding and autumn renovation of top quality golf greens.

- Ideal for summer overseeding, autumn renovation and new constructions
- Produces a fine, dense sward for the ultimate playing surface
- Good year round colour
- Disease resistant
- Hard wearing
- Very tolerant to close mowing

50% Sefton Browntop Bent

30% Egmont Browntop Bent

20% Arletta Browntop Bent

sowing rate 8g/m²

oversowing rate 5g/m²

pack size 20kg

mowing height 4-8mm

MM 10

GREENS, TEES AND SURROUNDS

Alternative to the traditional 80:20 mixture for construction, overseeding, renovating and repairing high quality greens and tees.

- Produces a fine, dense sward
- Tolerant to close mowing
- Disease resistant and hard wearing
- Good wear tolerance
- Year round colour
- Excellent for top quality golf greens, tees, surrounds and approaches

40% Caldris Chewings Fescue

40% Aporina Slender Creeping Red Fescue

12% Sefton Browntop Bent

8% Egmont Browntop Bent

sowing rate 35g/m²

oversowing rate 25-35g/m²

pack size 20kg

mowing height 4-8mm

MM 11

GREENS

Traditional mixture for overseeding, renovation and construction of high quality golf greens and for sward improvement.

- Ideal mixture for use in Spring, Summer and Autumn on existing and new surfaces
- Produces a fine, dense sward for superior golf greens
- Tolerant to close mowing
- Excellent disease resistance
- Good wear characteristics
- Lower nutrient and irrigation requirements

40% Caldris Chewings Fescue

40% Wagner 1 Chewings Fescue

8% Sefton Browntop Bent

12% Egmont Browntop Bent

sowing rate 35g/m²

oversowing rate 25-35g/m²

pack size 20kg

mowing height 4-8mm

MM 12

TEES & FAIRWAYS

For excellent wear tolerance and recovery on existing and new golf tees and fairways. Ideal for divotting, overseeding and new construction work.

New Formulation

- Excellent wear tolerance for a fine turf mix
- Good, year round appearance
- Lower nutrient, irrigation and maintenance requirements
- Produces a fine, dense, disease resistant sward
- Excellent mixture particularly for new constructions

30% Caldris Chewings Fescue

25% Aporina Slender Creeping Red Fescue

40% Heidrun Strong Creeping Red Fescue

5% Highland Browntop Bent

sowing rate 25-35g/m²

oversowing rate 15-25g/m²

pack size 20kg

mowing height 6-20mm

MM 13

TEES, FAIRWAYS, OUTFIELDS AND WITHOUT SSMG

High quality traditional mixture for overseeding or renovating fine dense tees, fairways and roughs, particularly where maintenance and input levels are low.

- Excellent drought resistance
- Low maintenance requirements
- Good recovery characteristics
- High disease resistance
- Ideal for divotting tees and fairways
- Suitable for semi-rough and rough areas

30% Caldris	Chewings Fescue
25% Aporina	Slender Creeping Red Fescue
10% Crystal	Hard Fescue
35% Heidrun	Strong Creeping Red Fescue

sowing rate 25-35g/m²
 oversowing rate 15-25g/m²
 pack size 20kg
 mowing height 6-20mm

MM 22

TEES, FAIRWAYS & DRIVING RANGES

For divotting, repairing, renovating, overseeding and construction of tees, fairways and outfield areas that are subjected to high levels of wear.

New Formulation

- Very hard wearing
- Quick to establish and recover
- Good sward density and colour
- Suitable for surrounds and approaches
- Excellent mixture for year round performance

30% Alison	Perennial Ryegrass
20% Malibu	Perennial Ryegrass
20% Aporina	Slender Creeping Red Fescue
25% Heidrun	Strong Creeping Red Fescue
5% Highland	Browntop Bent

sowing rate 25-35g/m²
 oversowing rate 15-25g/m²
 pack size 20kg
 mowing height 8-25mm

MM 50

TEES, FAIRWAYS & DRIVING RANGES

Superior divot mix for fast establishment and recovery in extreme high wear areas such as tees, fairways, outfields and even golf greens.

- Ideal for extreme wear areas
- Fast establishing and resilient, ideal for divotting, seeding and overseeding
- Fine leafed and tolerates close mowing
- Disease resistant and good colour
- Good density and cleanness of cut
- Can be used all year long

40% Malibu	Perennial Ryegrass
30% Venice	Perennial Ryegrass
30% Alison	Perennial Ryegrass

sowing rate 35g/m²
 oversowing rate 25-35g/m²
 pack size 20kg
 mowing height 6-15mm

WINTER SPORTS

Which MM Winter Sports mixture is ideal for you?

TECHNICAL OVERVIEW

FOOTBALL AND RUGBY

Selecting the correct mixture is vitally important when renovating or constructing a winter sports pitch. The mixtures must be able to perform in differing environments from the public park pitch to the premier league stadia to provide a first class sward.

With these demands in mind, MM60 has been developed over the years to provide high quality grass surfaces across the country. The four way ryegrass blend contains top rated cultivars, including Madrid – the Number 1 ryegrass for sports pitches. These cultivars together produce a sward that recovers from scarring and divot damage. They are quick to germinate and establishment is rapid thanks to the Headstart treatment. Superior disease resistance along with good all year colour make this the mixture of choice for many grounds managers.

For new pitch constructions MM 25 may also be used, this ryegrass and fescue mix will establish quickly giving a dense, hard wearing sward that has strong root growth in the early stages of sward development. The mix contains high quality cultivars that perform in a wide range of situations.

RACECOURSES

Race tracks and polo fields have to withstand a high degree of damage from horses over a whole season which means that selecting the right mixture for renovation is important. MM 60 will provide a dense hard wearing surface that recovers quickly from divots as it is 100% ryegrass, it germinates quickly from spring through to late in the autumn. MM 25 and MM 22 containing ryegrass and fescues provide cushioning in the bottom of the sward.

MM 25

FOOTBALL, GAELIC, RUGBY & SPORTS FIELDS

Construction and renovation of football pitches, rugby pitches and sportsfields.

- Fast germination
- High wear tolerance
- Produces a dense sward
- Excellent for stadium use
- High disease resistance
- Produces an excellent playing surface in a stadium environment

20% Melbourne Perennial Ryegrass

35% Cyrena Perennial Ryegrass

25% Eurosport Perennial Ryegrass

20% Heidrun Strong Creeping Red Fescue

sowing rate 35-50g/m²

oversowing rate 25-50g/m²

pack size 20kg

mowing height 25mm plus

MM 60

THE LEADING WINTER SPORTS RENOVATION MIXTURE

Renovation of football pitches, rugby pitches and sportsfields.

- Fast germination and establishment
- Produces a dense hard wearing sward
- Recovers quickly from damage and wear
- High disease resistance
- Produces an excellent playing surface in a stadium environment

30% Eurosport Perennial Ryegrass

30% Eurocordus Perennial Ryegrass

25% Columbine Perennial Ryegrass

sowing rate 35-50g/m²

oversowing rate 25-50g/m²

pack size 20kg

mowing height 25mm plus

MM 60

RACECOURSES, GALLOPS & POLO

Renovation and divot repair for racecourses, gallops and polo fields.

New Formulation

- Extremely fast germination
- Quick establishment
- High wear tolerance
- Fast divot recovery
- High disease resistance
- Produces great colour

30% Eurosport Perennial Ryegrass

30% Eurocordus Perennial Ryegrass

25% Columbine Perennial Ryegrass

15% Cyrena Perennial Ryegrass

sowing rate 35-50g/m²

oversowing rate 25-50g/m²

pack size 20kg

mowing height 25mm plus

SUMMER SPORTS

TECHNICAL OVERVIEW

The inevitable aim of today's professional Groundsman is to produce "The best possible, consistent playing surface". In order to achieve this aim, Seed Quality, Purity and Vigour are the underpinning factors required for long term success and are duly provided by the MM Range. Ally this with choosing mixtures that both suit the environmental situation and meet the requirements of the maintenance regime in order to make the best possible start.

BOWLING GREENS & CROQUET LAWNS

Still the most popular choice for high quality bowling greens is the traditional 80:20 fescue/ bent mix such as **MM11** which is most suitable in many situations. A slight variation on this theme is the **MM10**. One can of course use **MM8** which is a four way straight Fescue mixture. Ideal for free draining, drought susceptible and low input/maintenance bowling greens that are not subjected to excessive wear. And there is **MM9**, a three way straight Bent mix suited to greens that are less well draining, have higher wear and input/maintenance levels are higher. In certain situations, good results can also be achieved from using a dwarf rye mix such as **MM50**.

CRICKET WICKETS

For intensively used cricket wickets **MM50** is the preferred choice. A four way dwarf rye mixture for the ultimate in wear tolerance, speed of establishment, recovery and tolerance of close mowing. Currently being used from club cricket right up to Test Match level. For less intensive use and reduced maintenance requirements choose **MM29**, still with hard wearing dwarf rye grasses but also with traditional fescue and bent.

CRICKET OUTFIELDS

Our regular mixture for cricket outfield is **MM12**, containing Smooth Stalked Meadow Grass, which has low maintenance requirements and good recovery characteristics. Depending on precise requirements, one could also use **MM13** for overseeding or **MM22** where outfield are subjected to greater levels of wear.

TENNIS

Excellent performance characteristics make **MM50** the number one choice for tennis. A four way dwarf rye mix with superior wear tolerance, fast establishment and excellent recovery, some of which is used at the very highest level. For low use/minimal input use **MM29**.

MM 29

CRICKET SQUARES AND OUTFIELDS

- Fast germination
- Fine and dense sward
- Good recovery from damage
- Good disease resistance
- Compact growth
- Clean cutting quality

40% Malibu	Perennial Ryegrass
25% Alison	Perennial Ryegrass
30% Caldris	Chewings Fescue
5% Highland	Browntop Bent

sowing rate 35g/m²
oversowing rate 25-50g/m²
pack size 20kg
mowing height 4-20mm

MM 50

CRICKET SQUARES RENOVATION AND REPAIR

New Formulation

- Rapid germination
- Quick recovery from damage and play
- Fine leaved and hard wearing mix
- High shoot density
- High disease resistance
- Tolerant to close mowing
- Good all year round colour

40% Malibu	Perennial Ryegrass
30% Venice	Perennial Ryegrass
30% Alison	Perennial Ryegrass

sowing rate 35-45g/m²
oversowing rate 25-35g/m²
pack size 20kg
mowing height 4-20mm

MM 12

CRICKET OUTFIELDS WITHOUT RYEGRASS

New Formulation

- Produces a fine dense sward
- Lower mowing requirements
- Less water and nutritional requirements
- Strong recovery from creeping grasses
- Good disease resistance

30% Caldris	Chewings Fescue
25% Aporina	Slender Creeping Red Fescue
40% Heidrun	Strong Creeping Red Fescue
5% Highland	Browntop Bent

sowing rate 25-35g/m²
oversowing rate 15-25g/m²
pack size 20kg
mowing height 13-25mm

MM 8

BOWLING GREENS & CROQUET LAWNS

Quality traditional mixture, especially useful for spring overseeding of high quality bowling greens to improve sward composition and aid recovery from disease scarring.

- Excellent for spring and summer overseeding
- Very drought tolerant
- Greater disease resistance
- Low nutrient requirement
- Produces a fine, dense sward
- Ideal mixture for low input, free draining and traditional bowls greens

40% Caldris Chewings Fescue

15% Carousel Slender Creeping Red Fescue

45% Aporina Slender Creeping Red Fescue

sowing rate 25g- 35g/m²

oversowing rate 15g- 25g/m²

pack size 20kg

mowing height Down to 5mm

MM 9

BOWLING GREENS & CROQUET LAWNS

Excellent mixture for summer overseeding and autumn renovation of top quality bowling greens.

- Ideal for summer overseeding, autumn renovation and new constructions
- Produces a fine, dense sward for the ultimate playing surface
- Good year round colour
- Disease resistant
- Hard wearing
- Very tolerant to close mowing

50% Sefton Browntop Bent

30% Egmont Browntop Bent

sowing rate 35g/m²

oversowing rate 25-35g/m²

pack size 20kg

mowing height 4-8mm

LANDSCAPING

Which MM Landscaping mixture is ideal for you?

TECHNICAL OVERVIEW

When selecting mixtures for landscaping purposes it is vital that due consideration is given to both the end use and also the intended maintenance regime. A non ryegrass sward will require less maintenance, resulting in reduced mowing and fertiliser which enhances environmental issues. For these types of areas, MM16 produces a fine looking sward that is drought and shade tolerant. The inclusion of a range of fescues, particularly Crystal – the top rated Hard Fescue – provides these key attributes. This mixture is also very good for soil stabilisation of embankments and steep slopes whilst remaining low maintenance.

Where both lower maintenance and some tolerance to hard wear are required use MM21. This successful blend of 20% rye and 80% fescue are well suited for both objectives.

MM22 will produce a hard wearing, yet attractive sward that has the fine leaved ryegrass cultivars alongside the drought tolerant fescues which together produce an excellent year round lawn or landscape area.

MM 16

LOW MAINTENANCE LAWNS AND LANDSCAPE AREAS

- Drought and shade tolerant
- Low nutrient requirements
- Reduced mowing
- Good soil stabilisation
- Produces an attractive, fine, dense sward

25% Caldris	Chewings Fescue
25% Aporina	Slender Creeping Red Fescue
30% Heidrun	Strong Creeping Red Fescue
15% Crystal	Hard Fescue

Premium range of sports and amenity grass seed mixtures

Lindsays premium grass seed mixtures have been carefully designed to meet the varied requirements for amenity and landscape areas. All the varieties used in these mixtures have been thoroughly tested at the Sports Turf Research Institute and we assure you of a quality product that will meet your requirements for play, appearance and maintenance.

All Headstart treated

AMENITY

This mixture is designed to look good and wear well under varied conditions, a very good general purpose mix, which can be used in a number of situations. It is hard wearing and keeps a good green colour all through the year. It is an ideal mixture for overseeding or reseeding areas of high wear, for use in utility areas, back lawns, golf tees, road verges. The mixture contains true amenity grasses all tested by the STRI.

15% Himalaya Perennial Ryegrass

35% Double Perennial Ryegrass

20% Margarita Strong Creeping Red Fescue

30% Corail Strong Creeping Red Fescue

Sowing Rate: 35g per sq. m.

Pack Size 25kg

Mowing height: 25mm

LAWNPRIDE

Tennis Courts, Hockey Pitches, Landscaping, Hard Wearing Lawns.

A dual purpose mixture combining the fine texture quality of fescue with the wear tolerance of turf type perennial ryegrass. This excellent combination makes the mixture ideal for tennis, hockey, general landscaping and domestic lawns.

30% Passion Perennial Ryegrass

25% Platinum Perennial Ryegrass

10% Trophy Chewings Fescue

35% Corail Strong Creeping Red Fescue

Sowing rate: 35g per sq. m.

Pack Size 25kg

Mowing height: 25mm

FINEGREEN

Tees and Fairways, Cricket Outfields, Fine Lawns, Shaded Areas.

An ideal mixture for those requiring a fine leaved dense sward. This ryegrass free mixture will be quick to establish, showing good all year round colour with the added benefit of shade and drought tolerance.

25% Trophy Chewings Fescue

20% Smirna Slender Creeping Red Fescue

50% Heidrun Strong Creeping Red Fescue

5% Highland Browntop Bent

Sowing rate: 35g per sq. m.

Pack Size 25kg

Mowing height: 10-25mm

RYEBLEND (REPLAY)

**Sportsfield Renovation,
Ryegrass Tees and Cricket
Squares.**

A blend of turf type perennial ryegrasses selected for their individual qualities of wear tolerance, shoot density, and disease resistance. This mixture is ideal for the renovation of football and rugby pitches, providing a hard wearing resilient playing surface.

45% Himalaya Perennial Ryegrass

30% Melbourne Perennial Ryegrass

25% Bocelli Perennial Ryegrass

Sowing rate: 35g per sq. m.

Pack Size 25kg

Mowing height: 25mm
